12. Multipying frequency responses

a) Amplitude Plot

Given that:

$$H_b(\omega) = \frac{1}{4} + \frac{1}{2}\cos(\omega)$$

$$H_c(\omega) = \frac{1}{4} - \frac{1}{2}\cos(\omega)$$
(2)

$$H_c(\omega) = \frac{1}{4} - \frac{1}{2}\cos(\omega) \tag{2}$$

$$\cos^2(x) = \frac{1 + \cos(x)}{2} \tag{3}$$

Follows:

$$H_{bc}(\omega) = H_b(\omega)H_c(\omega)$$

$$= \frac{1}{4} + \frac{1}{2}\cos(\omega) - \frac{1}{2}\cos(\omega) - \frac{1}{4}\cos^2(\omega)$$

$$= \frac{1}{4} - \frac{1}{4}\cos^2(\omega)$$

$$= \frac{1}{4} - \frac{1}{4}\frac{1 + \cos(2\omega)}{2}$$

$$= \frac{1}{4} - \frac{1}{8} - \frac{1}{8}\cos(2\omega)$$

$$= \frac{1}{8} - \frac{1}{8}\cos(2\omega)$$

$$= \frac{1}{8} (1 - \cos(2\omega))$$

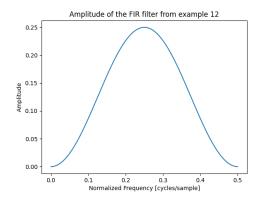

Figure 1: Amplitude for the given FIRfilters.

b) Time Domain Coefficients

Given that:

$$H_{bc}(\omega) = \frac{1}{8} - \frac{1}{8}\cos(2\omega) \tag{4}$$

$$\cos(x) = \frac{e^x + e^{-x}}{2} \tag{5}$$

Follows:

$$\frac{1}{8} - \frac{1}{8}\cos(2\omega) = \frac{1}{8} - \frac{1}{8}\frac{e^{2i\omega} + e^{-2i\omega}}{2}$$
$$= -\frac{1}{16}e^{2i\omega} + \frac{1}{8}e^{0i\omega} - \frac{1}{16}e^{-2i\omega}$$
$$\Rightarrow \left\{ -\frac{1}{16}, \ 0, \ \frac{1}{8}, \ 0, \ -\frac{1}{16} \right\}$$

13. IRR filter

Given that:

$$\{a_{-1}, a_0, a_1\} = \left\{-\frac{1}{2}, 1, 0\right\}$$
 (6)

$$\{b_{-1}, b_0, b_1\} = \left\{\frac{1}{8}, \frac{1}{4}, \frac{1}{8}\right\}$$
 (7)

Follows:

$$\begin{split} H(\omega) &= \frac{Y(\omega)}{X(\omega)} \\ &= \frac{\frac{1}{8}e^{i\omega} + \frac{1}{4} + \frac{1}{8}e^{-i\omega}}{-\frac{1}{2}e^{i\omega} + 1} \\ &= \frac{\frac{1}{4}(1 + \cos(\omega))}{1 - \frac{1}{2}e^{i\omega}} \qquad \qquad = \frac{1 + \cos(\omega)}{4 - 2e^{i\omega}} \end{split}$$

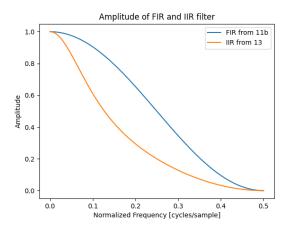

Figure 2: Amplitude comparison for the filters from example 11a and 13.
